1. The first thing I did was
to go to the office
and see what was going on.

Progress

I have been very busy
with the work
and have not had
time to write.

I have been thinking
of writing to you
for some time
but have not had
time.

I am well and hope
you are the same.
I have been thinking
of writing to you
for some time
but have not had
time.

Part Lesson

2. ...

Math 101

1. The first part of the problem is to find the derivative of the function $f(x) = x^2 + 3x - 5$.

2. To do this, we use the power rule for differentiation.

3. The derivative of x^2 is $2x$, the derivative of $3x$ is 3 , and the derivative of -5 is 0 .

4. Therefore, the derivative of $f(x)$ is $f'(x) = 2x + 3$.

5. Next, we evaluate the derivative at $x = 2$.

6. Substituting $x = 2$ into $f'(x) = 2x + 3$, we get $f'(2) = 2(2) + 3 = 7$.

7. Finally, we interpret the result. The derivative of $f(x)$ at $x = 2$ is 7 , which represents the slope of the tangent line to the curve at that point.

8. In conclusion, the derivative of $f(x) = x^2 + 3x - 5$ at $x = 2$ is 7 .

9. This completes the solution to the problem.

10. The final answer is $f'(2) = 7$.

11. Thank you for reading.
